

Downloading and Installing the Mobile Map for IOS, Android, or Windows device

(See * below)

Common to all devices:

1. Open your browser (see ** below) and return to www.mobilehuntingmaps.com, login and your My Account page will open.
2. On the left side, click on Orders.
3. Your order will appear on the right side of the page.
4. At the end of the order row, click on View to open the details of your order.
5. Beneath the name of the State you will see Download: Download Now and the password needed to open the map file with the CarryMap app.
6. Write down the password then click on Download Now.

IOS Devices: (see ** below)

1. Dependent on your version of IOS (Apple operating system) you might be asked a second time to confirm the download.
2. How the download progress is displayed on your phone's screen varies dependent on the IOS version on your phone. On IOS 12.0 or newer, a blue circle with a down pointing arrow inside will appear and a tiny blue line will move from left to right just under the circle as the download is in progress. Be patient as some of the map data files are large. Dependent on your internet speed and your WIFI strength, the download can take several minutes. Do not try to download a file using a cell phone service, more than likely it will drop before the download is complete.
3. Once the download progress is complete (the blue circle moves up and down and the blue line disappears), the file has been downloaded.

4. Log out of your MyAccount and locate the files icon on your phone.
5. Tap on the files icon and your iCloud downloads window should open (if you have previously downloaded files to your phone). If not, the Browse window will open and under Locations, click on iCloud Drive. The iCloud Drive window will open, displaying a download folder. Click on it.
6. Locate the map data file and press on the area just above the file name and a drop-down menu appears.
7. At the bottom of the drop-down menu, tap on Share and across the bottom you will see a line of icons. Scroll the line to the left until you either see the CarryMap app icon or at the far right end a box with three horizontal dots that reads More. If the CarryMap app appears, tap on it (skip to step 16), if not, click on More and the Apps window opens.
8. Within the Apps window, scroll up until you see Copy to CarryMap. Tap on it.
9. A dialog box opens asking if you want to save to home directory, tap Yes.
10. The CarryMap app will open and you will be prompted to input the password you wrote down in step 6. Click OK and the map will appear as a faint image. Once the map is unlocked you should not have to enter the password to open the map next time you open CarryMap.
11. Gently tap on the plus button and the screen will zoom in and you can verify the map is the State you wanted.

Android Devices:

1. The download progress can be viewed by noting the movement of a downward arrow in the upper left-hand corner of the screen and/or by the pulsating downward arrow in the lower left corner of the screen. Next to the name of the file being downloaded is a “details” link. Taping on the link will show the progress of the download and

approximate time remaining.

2. When the download is complete, the screen should open in the files window and downloads will be displayed, then skip to step 6 below. If not, find the files icon and tap on it, then tap on the Downloads within the Categories section.
3. Tap on the name of the data file. Most likely you will get a message that reads Search the Play Store? If so, tap on search and the CarryMap icon will be displayed. Tap on it and because you already have it loaded on your device, an Open button will appear. Tap on the Open button.
4. The List of Maps screen will open within CarryMap. Tap on the blue circle with the white cross in the lower left corner of the screen.
5. In the Data window, tap on Download.
6. Tap on the name of the downloaded file and it will copy to the CarryMap app.
7. The padlock symbol to the right of the file name indicates if it is locked or unlocked.
8. If unlocked, tap on the file name and the map will open.
9. If locked, tap on the file name and enter the password noted above in Step 6 common to all devices. Once the map is unlocked you should not have to enter the password to open the map next time you open CarryMap.
10. Gently tap on the plus button and the screen will zoom in and you can verify that the map is the State you wanted.

Windows devices:

1. We recommend you use Chrome. The download progress is displayed in the lower left corner of the screen indicating the approximate time until completed. A large file, can

take over 5 minutes even with a download speed of 26 Mbps.

2. Upon completion of the download, tap on your Files Explorer icon, locate the download folder, tap on downloads, then tap on the map data file.
3. The CarryMap window will open. Enter the password from Step 6 under Common Devices and the map will open.
4. Gently tap on the plus button and the screen will zoom in and you can verify that the map is the State you wanted.

If you have trouble working through these steps, please call us at: 906-767-0045

If you have not done so already, be sure to check out the video tutorials under the Instructions tab on our store's website. Also, click on the Instructions tab, read down, and you will see where there are links for a PDF "How To Manual" for getting the most out of a Scout-N-Hunt Mobile Hunting Map using the CarryMap app with an IOS device" and "How to Manual" for getting the most out of a Scout-N-Hunt Mobile Hunting Map using the CarryMap app with an Android device".

***Do not start the download process until you have downloaded the appropriate CarryMap app for your device.**

****The default browser for IOS is Safari, for Android and Windows we recommend Chrome as it seems to work better than Edge, FireFox, or the others without causing issues. The steps noted will vary dependent on your IOS version and iPhone or iPad model. For example, an iPhone 8 differs from an iPhone 10 or 11.**
